Community Architecture Project Proposal

Culminating Assessment
TDA 3/4M Architectural Design
January 2023

Project description

For this project, you will work in groups of two to come up with a community architecture project proposal. You will choose from one of two potential development sites in Windsor, and come up with a vision for a community architecture project for the future of that site.

Project description

The type of project you propose is up to you. Community architecture includes a wide array of projects (ex. affordable housing, community centres, gathering spaces). What's most important is that your space brings people together and/or addresses a community need.

Step 1:
Choose your site

Once you have a partner, select a project site from one of the following options:

- Met Hospital
- Windsor Arena

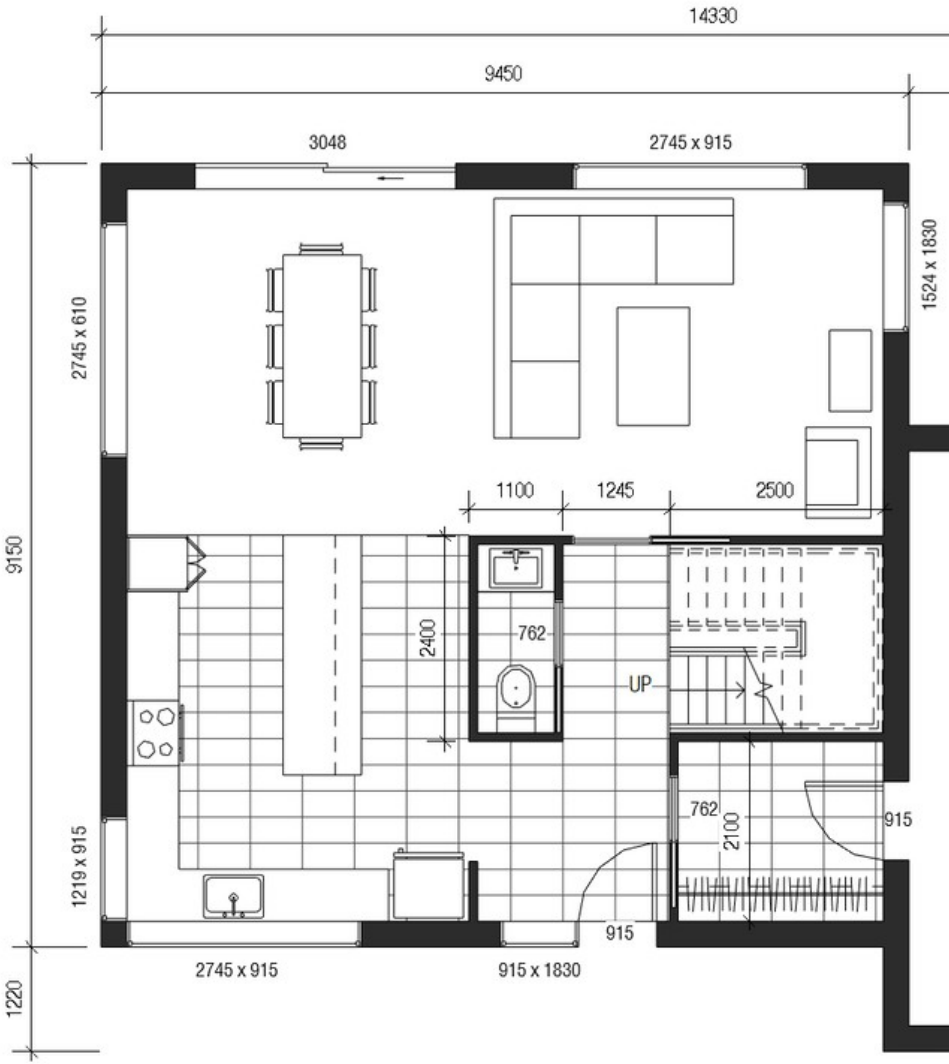

Step 2: Research and brainstorm

Conduct research on your site to determine the following properties of the site and the unique community needs.

After researching, you should then think about what kind of project you'd like to propose.

Step 3:
2D Floor Plan

Using Revit, you will create a quick floor plan mockup to include in your final presentation board.

Step 4:
3D Model

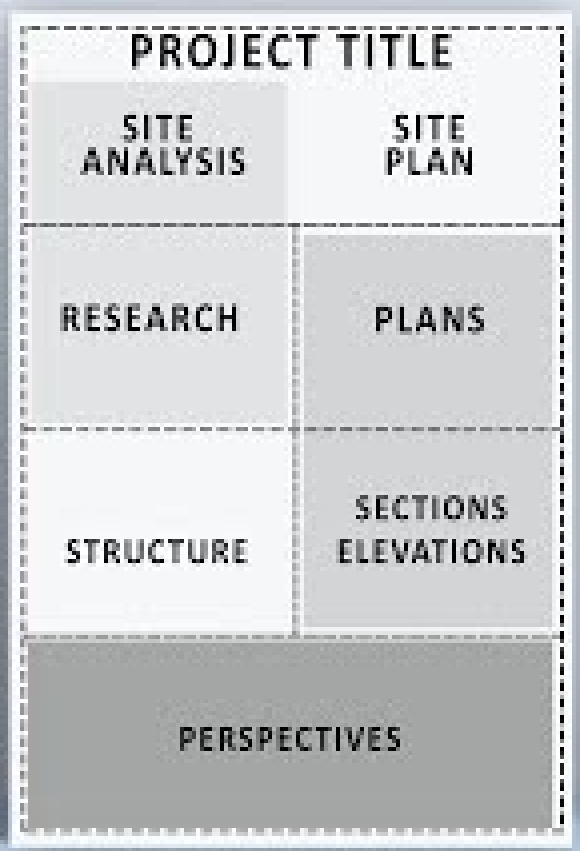

- Use Revit or SketchUp to create a 3D model of your 2D floor plan
- You do not need to create a super detailed interior
- Focus on the elements of your design that address community needs

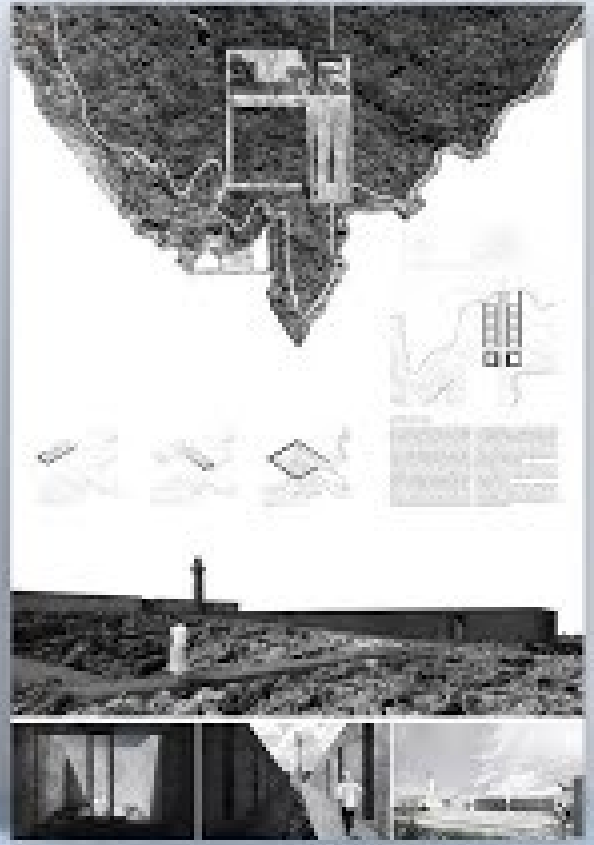

Step 5:
Presentation

You will create an architectural presentation board to showcase your project and explain your design decisions. You can use Canva, Google Drawings, Photoshop, etc. On the exam day, you will present your proposal to the class.
