Community Architecture Proposal

Research document

1. What are the properties of your project site? Ex. size of the lot, location, neighborhood.

- Size lot: 2.5 Acres,
- Location: (Downtown) 572 McDougall St and , Windsor, ON N9A 1L4
- Ward 4

2. What are the demographics of the neighborhood? Ex. population, income, race, languages.

Ward 4

- Population (2021): 25, 161
- Average household income (2020): $69,350
- Low income rate after tax: 18.69%
- Population under 21: 21.7%
- Population over 65: 15.5%
- Most common languages: Arabic and Italian
- Population that identifies as Indigenous: 1045
- One parent Families: 1910
- Women + led lone parent families: 81.30%
- Multigenerational Households: 270
- Owner to renter ratio 6.4:1
- Median Dwelling Value: $461,923

3. What are the unique community needs for your site area? What is missing from the area? Do certain communities in that area have a safe space to gather? Is there a lack of public space?

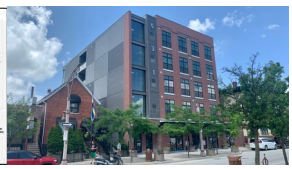

Ward 4 needs more color in the art, as well as an elaborate grocery store that is accessible. People in ward 4 shouldn't always have to go to other wards for retail of fresh produce, despite the other stores they have on that street. At the same time, more permanent residential and affordable housing, information and study halls (libraries), disability access, and more access points are also needed. These things are what are missing from the area. While certain communities can gather safely, I believe we need to incorporate that aspect into our building. As for a lack of public space for recreation (volleyball, basketball, soccer), I believe there is a lack.

4. Describe your community architecture project. How does it meet the unique needs of the neighborhood? How does it support the community around it? How will it bring people together?

- Idea green and sustainable apartments
- Including a underground parking garage
- Various stores (grocery, hardware etc)
- A few gym facilities
- The apartments will provide living space for people in need
- The parking garage allows for more space to be utilized on site as there is no need to take away land for a parking lot.
- *Stores located in the building offer residents and people living nearby easy to access products without having to travel far.*
- *A public gathering space as an auditorium that can be rented for use by groups; ethnic organizations can gather and discuss.*
- *Parkways and recreational fields can be located in the courtyard for volleyball, soccer, etc; brings people together to play sports no matter who they are or what they have.*
- *Site is near many other businesses', more residential units will bring more people to the area and increase volume for local business'.*
- *Close by to Windsor Detroit tunnel, downtown and other services*

5. What are some existing projects or buildings that will inform your design? In the space below, please include links, photos, and/or videos of other projects that inspire your vision.

Homestar 8 Apartments & Mews
Lower Roof
Upper Roof
Apartments
Timber shutters reducing solar gain in summer
Green roofs
Breezeways for macro air flow
Carpark
Daldy Street Park
Partial timber structure and timber cladding

SOTA's Sustainable Green Building Approach
The environmental impact of construction and of the building itself is minimized.
Harness natural energy—solar, geothermal, wind, and water.
One of the most important features of the green building approach is a reduction in operating cost.
$$
Harmony of people-planet interaction—people are simply happier in buildings with a connection to the outdoors.
Bring the outdoors inside:
- Natural lighting (daylighting)
- Plantings
- Biophilic spaces (ie greenhouses, etc)
- Fresh air circulation
Preservation / Restoration—"The greenest building is the one that already exists."
Healthy indoor environment for occupants. This is especially critical in healthcare and nursing facilities.
