Desk Organizer Project

For this project, you will design and 3D print your very own desk organizer.

Your design should be able to hold at least three different items you tend to bring to class or keep on your desk.

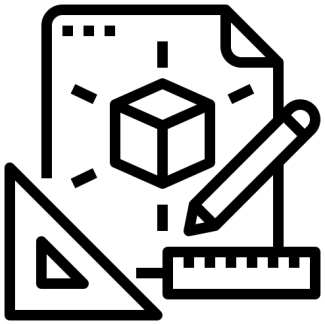

Design Criteria

1. Must hold **at least three** different items
2. Must be **no larger** than **90mm x 90mm x 90mm**
3. Walls must be **no thicker** than **2mm** wide
4. Must fit items **your unique items** (things you actually own and use)
5. Must be a **viable 3D print**

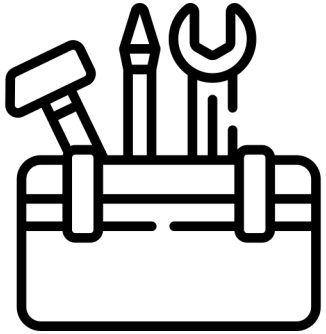

Design Process

Define problem and research

Brainstorm and conceptualize

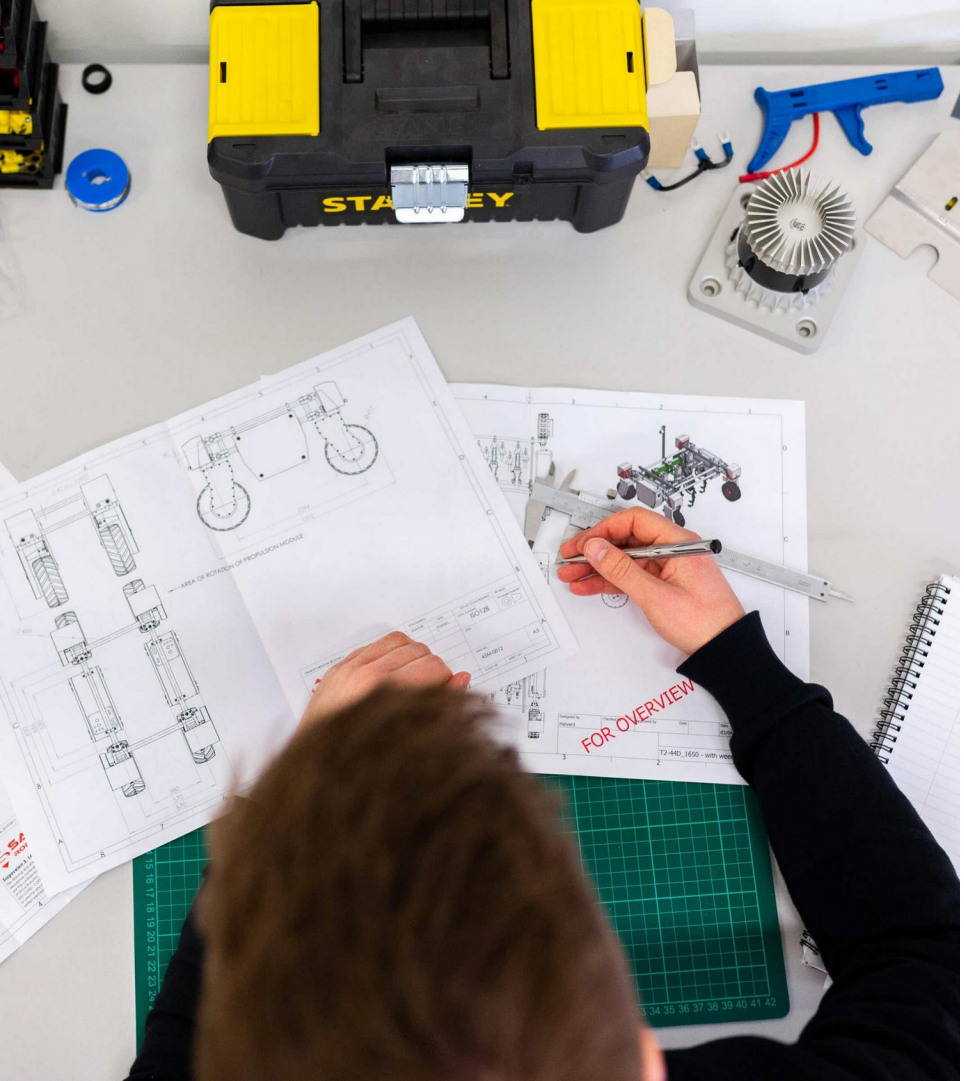

Build prototype, test, and refine

Stage 1: Identify the problem

- Goal: Understand what you are designing and why.
- Requirements: Answering questions about the problem, user, and creating rules.

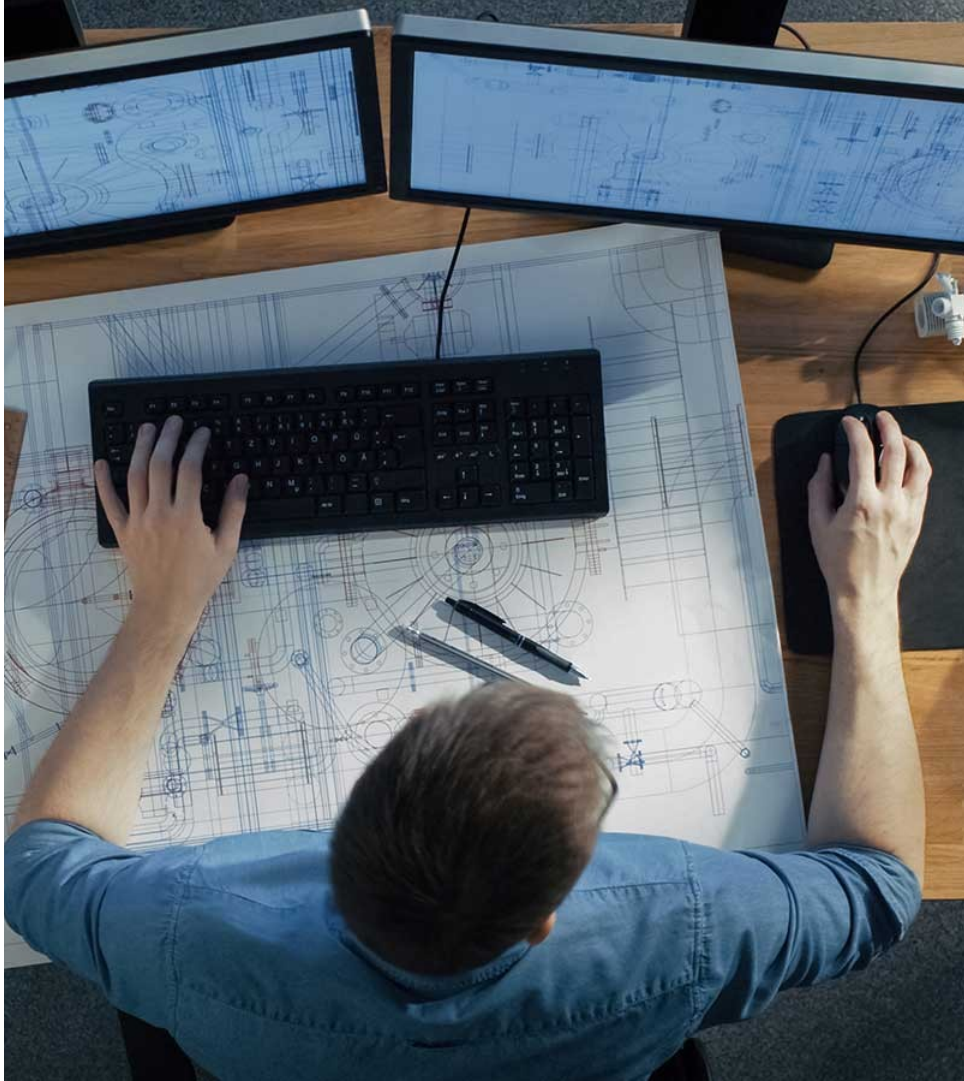

Stage 2: Plan and Research

- Goal: Learn more before you start designing.
- Requirements: Find examples, think about tools, materials, and timelines

Stage 3:
Create Ideas

- Goal: Brainstorm different designs.
- Requirements: create concept sketches and analyze them

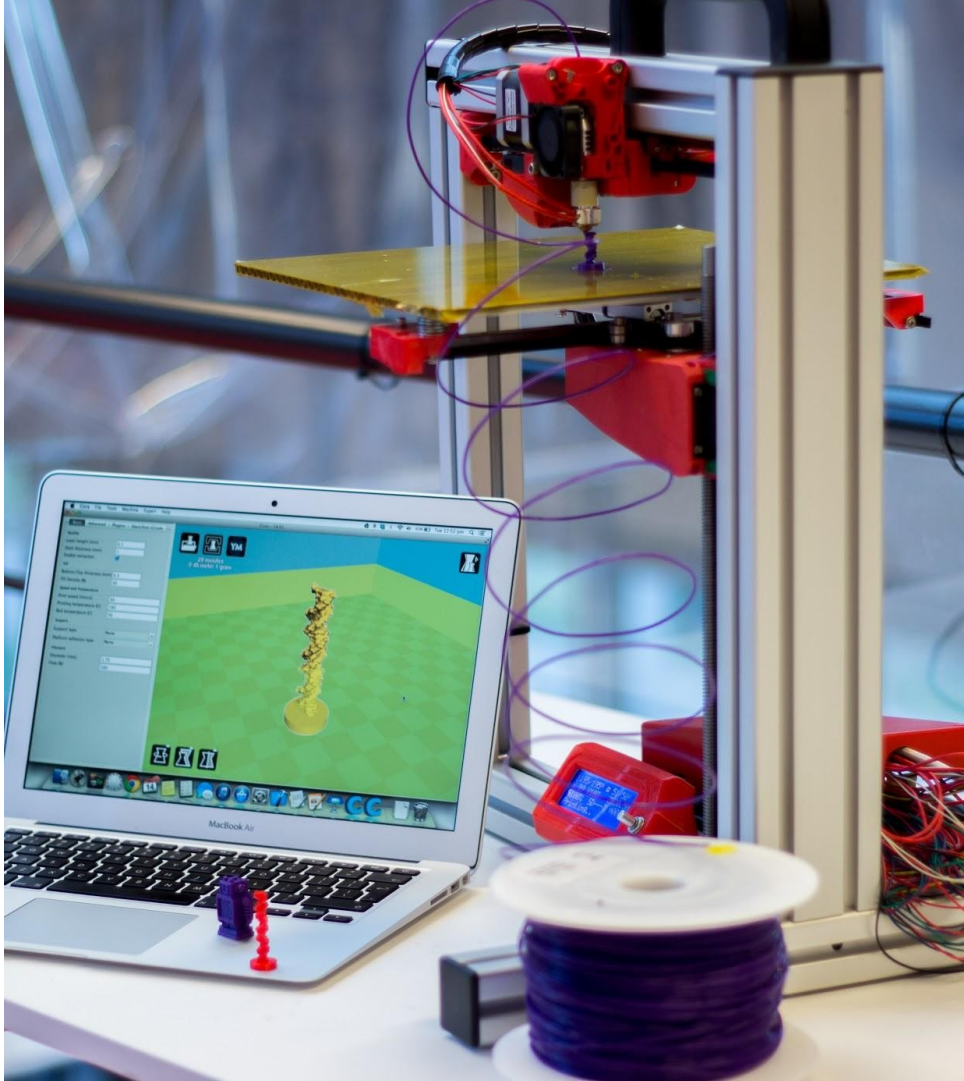

Stage 4: Choose and Model

- Goal: Pick your best idea and make a 3D model.
- Requirements: choose best idea, create orthographic sketch and 3D model

Stage 5:
Build and Test

- Goal: Print your design and test it.
- Requirements: send design to 3D printer, test it for any problems.

Stage 6: Improve and Reflect

- Goal: Make changes and think about your learning.
- Requirements: think about the design process and answer reflection questions.

Questions?

Use this time to clarify expectations.
